Neetpal Singh

7505687812 — neetpalsingh750@gmail.com — linkedin.com/in/neetpal — github.com/neetpal

Summary — AI Engineer with 2 years of experience designing Enterprise AI applications using Generative AI, Agentic AI, RAG, Multi-Agent Systems, LLMs. Experienced in building AI-powered SaaS platforms, compliance automation systems, enterprise chatbots, workflow orchestration.

Skills

Programming: Python, SQL, Java, Spring Boot, FastAPI, REST API, JWT, Cypher
AIML: Gen AI, Agentic AI, RAG, LangChain, LangGraph, LangFlow, LLM Fine-Tuning, MCP, N8N, OpenAI, Azure AI Foundry, AWS Bedrock, Anthropic Claude, Gemini, Groq, Ollama, HuggingFace, Sklearn, Pytorch, TensorFlow, Transformers, Unsloth
Data: PostgreSQL, SQL Server, MongoDB, Airflow, Airbyte, Tableau, Power BI, ChromaDB, Qdrant, PGVector, Neo4j
Soft Skills: Problem-solving, Team Management, Public Speaking, Leadership, Critical Thinking

Work Experience

Ascent Business Technology, Gurugram **Oct 2024 – Present**
AI Engineer

- Designed and developed Auto Compliance AI, that continuously monitors RBI, SEBI and other regulatory updates using RSS feeds, web crawling automatically generate compliance action items, create draft compliance versions and notify stakeholders through automated email workflows.
- Designed and developed a self-hosted intelligent chatbot platform using a Hybrid RAG architecture combining Vector Databases, Graph Databases, and Elasticsearch (lexical search) to enable accurate, context-aware enterprise search.
- Built a Generative AI–powered compliance intelligence system that scans organizational data to automatically recommend relevant compliance programs, regulatory requirements, and internal controls using Agentic AI workflow.
- Implemented Role-Based Access Control (RBAC) across the knowledge base to ensure department-level data isolation, secure document access, and governance-aligned information retrieval.
- Developed an AI-driven NLP Query and Report Generator plugin service that integrates directly with product databases, enabling automated compliance reports and analytics for any connected application.
- Contributed as part of the AI team for a **GRC (Governance, Risk, and Compliance)** product, focusing on enterprise-grade AI solutions for risk assessment, regulatory mapping, and compliance automation.
- Built a Hybrid ELTL pipeline for PDFs and unstructured data using chunking, embeddings into Vector DB and Graph DB.
- Implemented risk prediction models for GRC using filtered regulatory news and market trend analysis.
- Fine-tuned large language models including **LLaMA 7B** and **Mistral Large 3** using **LoRA** and **QLoRA** techniques to enable efficient domain-specific model adaptation with reduced compute cost.

Education

Master of Computer Application **2023 – 2025**
Galgotias University – Grater Noida *CGPA: 8.68*

Bachelor of Computer Application **2020 – 2023**
Dr. Bhim Rao Ambedkar University – Agra *CGPA: 7.39*

Projects

- **PlugAI Business – AI Service Platform** *(Frontend: React | Backend: Python FastAPI | AI Integrated)*
  Built a full-stack AI platform with Public and Admin portals featuring an AI Assistant, Google Calendar–based auto call scheduling, and a News and Article Management system with full CRUD support.
- **Agent Platform – Multi-Tenant SaaS Chatbot Platform** *(SaaS | RAG | Agentic AI | Configurable LLM Providers)*
  Developed a multi-tenant SaaS chatbot platform allowing businesses to create Agent APIs, Extractor Agents, and deploy custom AI chatbots by uploading documents or crawling websites.
- **ChromaDB Admin** *(FastAPI | React | Docker | ChromaDB)*
  Developed an open-source web-based ChromaDB administration platform Published as Docker image, Python package (PyPI) and npm package.
- **Alzheimer's Disease Detection Using Transfer Learning**
  Built a deep learning–based Alzheimer's detection system using brain MRI images.

Certifications

- **Applied Data Science Lab by World Quant University** : 6-month program in AI, machine learning, and deep learning.
- **Graph DB Certified Professional by Neo4j** : Graph data modeling, Cypher querying, and knowledge graph design.
- **Google AIML by AICTE** : Image Processing, NLTK, TensorFlow, TensorFlow Lite, Digital Image Processing
- **Machine Learning by Microsoft** : Train and evaluate regression, classification, clustering, deep learning models
